

ENSURING THE FUTURE ENGINEERS IN ISRAEL

Engineering is a popular field of study as it is practical and commands a reasonable salary. Despite the fact that it is a growing scientific and technological field, Israel suffers from a shortage of engineers. It is crucial that SCE, Israel's leading engineering college, expand its facilities and areas of study, to attract more students and offer them a high-quality education that will meet the demands of markets over the coming decades.

The Beersheva SCE campus seeks a donor to help maintain and upgrade a core educational facility that houses the Chemical, Civil and Mechanical Engineering departments and their associated research laboratories, lecture halls, classrooms and meeting rooms. The building has four stories and includes a cafeteria, an auditorium and the student union.

ENGINEERING BUILDING NAMING

The donor's name will be affixed to the outside of the building in individually mounted letters. Customized signage will be prominently displayed and the building's name will appear in all SCE communications.

Naming of Building (c)	\$6,500,000
Meeting and Events Hall	\$2,000,000
Park & Gardens at the Entranceway	\$1,000,000
